Python Practice Problems

1. User will input (3ages).Find the oldest one
2. Write a program that will convert celsius value to fahrenheit
3. User will input (2numbers).Write a program to swap the numbers
4. Write a program that will give you the sum of 3 digits
5. Write a program that will reverse a four digit number.Also it checks whether the reverse is true.
6. Write a program that will tell whether the number entered by the user is odd or even.
7. Write a program that will tell whether the given year is a leap year or not.
8. Write a program to find the euclidean distance between two coordinates.
9. Write a program that take a user inputr of three angles and will find out whether it can form a triangle or not.
10. Write a program that will take user input of cost price and selling price and determines whether its a loss or a profit
11. Write a program to find the simple interest when the value of principle,rate of interest and time period is given.
12. Write a program to find the volume of the cylinder. Also find the cost when ,when the cost of 1litre milk is 40Rs.
13. Write a program that will tell whether the given number is divisible by 3 & 6.
14. https://practice.geeksforgeeks.org/problems/angle-between-hour-and-minute-hand0545/1?page=2&category[]=Mathematical&category[]=Numbers&category[]=number-theory&sortBy=submissions

15. https://practice.geeksforgeeks.org/problems/overlapping-rectangles1924/1?page=3&category[]=Mathematical&category[]=Numbers&category[]=number-theory&sortBy=submissions

16. Write a program that will determine weather when the value of temperature and humidity is provided by the user.

TEMPERATURE(C)	HUMIDITY(%)	WEATHER
>= 30	>=90	Hot and Humid
>= 30	< 90	Hot
<30	>= 90	Cool and Humid
<30	<90	Cool

17. Write a program that will take three digits from the user and add the square of each digit.

18. Write a program that will check whether the number is armstrong number or not.

19. Write a program that will take user input of (4 digits number) and check whether the number is narcissist number or not.

20.   Write a program that will give you the in hand salary after deduction of HRA(10%),DA(5%),PF(3%), and tax(if salary is between 5-10 lakh−10%),(11-20lakh−20%),(20< _   − 30%)(0-1lakh print k).

21. Write a menu driven program - 1.cm to ft 2.kl to miles 3.usd to inr 4.exit

22. Write a program that will tell the number of dogs and chicken are there when the user will provide the value of total heads and legs.

23. Write a program that will swap numbers

24. Write a program to find the sum of first n numbers, where n will be provided by the user. Eg if the user provides n=10 the output should be 55.

25. Write a program that can multiply 2 numbers provided by the user without using the * operator
26. Write a program that can find the factorial of a given number provided by the user.
27. Write a program to print the first 25 odd numbers
28. Write a program to print whether a given number is prime number or not
29. Print all the armstrong numbers in the range of 100 to 1000
30. The current population of a town is 10000. The population of the town is increasing at the rate of 10% per year. You have to write a program to find out the population at the end of each of the last 10 years. For eg current population is 10000 so the output should be like this:

    10th year – 10000

    9th year – 9000

    8th year – 8100 and so on
31. Write a program to print all the unique combinations of 1,2,3 and 4
32. User will provide 2 numbers you have to find the HCF of those 2 numbers
33. User will provide 2 numbers you have to find the by LCM of those 2 numbers
34. Print first 25 prime numbers
35. Print the first 20 numbers of a Fibonacci series
36. Write a program to find the compound interest
37. Write a Python program that accepts an integer (n) and computes the value of n+nn+nnn.
38. Take a number from the user and find the number of digits in it.
39. Print all factors of a given number provided by the user.
40. Find the reverse of a number provided by the user(any number of digit)
41. Write a program to print the following pattern

    *

    **

```
***
****
*****
```

42. Write a program to print the following pattern

```
*
**
***
**
*
```

43. Write a program to print the following pattern

```
    *
   * * *
  * * * * *
 * * * * * * *
* * * * * * * * *
```

44. Write a program to print the following pattern

```
1
1 2 1
1 2 3 2 1
1 2 3 4 3 2 1
1 2 3 4 5 4 3 2 1
```

45. Write a program to print the following pattern

```
1
2 3
4 5 6
7 8 9 10
```

46. Write a program to calculate the sum of the following series till the nth term

$$1/1! + 2/2! + 3/3! + 4/4! + \ldots + n/n!$$

n will be provided by the user

47. Write a Python Program to Find the Sum of the Series till the nth term:

$$1 + x^2/2 + x^3/3 + \ldots x^n/n$$

n will be provided by the user

48. The natural logarithm can be approximated by the following series.

$$\frac{x-1}{x} + \frac{1}{2}\left(\frac{x-1}{x}\right)^2 + \frac{1}{2}\left(\frac{x-1}{x}\right)^3 + \frac{1}{2}\left(\frac{x-1}{x}\right)^4 + \ldots$$

If x is input through the keyboard, write a program to calculate the sum of the first seven terms of this series.

49. Write a program that keeps on accepting a number from the user until the user enters Zero. Display the sum and average of all the numbers.

50. Write a program that accepts 2 numbers from the user a numerator and a denominator and then simplifies it

Eg if the num = 5, den = 15 the answer should be ⅓

Eg if the num = 6, den = 9 the answer should be ⅔

51. Find the length of a given string without using the len() function.

52. Extract username from a given email.

Eg if the email is nitish24singh@gmail.com then the username should be nitish24singh

53. Count the frequency of a particular character in a provided string. Eg 'hello how are you' is the string, the frequency of h in this string is 2.

54. Find the index position of a particular character in another string.

55. Count the number of vowels in a string provided by the user.

56. Write a program which can remove a particular character from a string.

57. Write a program that can check whether a given string is palindrome or not.

58. Write a python program to remove all the duplicates from a list
59. Write a python program to convert a string to title case without using the title()
60. Write a python program to find the max item from a list without using the max function
61. Write a python program to reverse a list
62. Write a python program to search a given number from a list
63. Write a program that can create a new list from a given list where each item in the new list is square of the item of the old list
64. Write a program that can reverse words of a given string.

  Eg if the input is Hello how are you

  Output should be you are how Hello

65. Write a program that can count the number of words in a given string
66. Write a program to check if a list is in ascending order or not
67. Create 2 lists from a given list where 1st list will contain all the odd numbers from the original list and the 2nd one will contain all the even numbers
68. Write a program to merge 2 list without using the + operator
69. Write a program to replace an item with a different item if found in the list
70. Write a program that can convert a 2D list to 1D listWrite a program that can print
71. Write a program that can perform union and intersection on 2 given list.
72. the max item of each row of a matrix.
73. Write a program that can convert an integer to string.
74. Write a program to print the shape of a matrix.
75. Write a program that can check if you can perform matrix multiplication on 2 matrices

76. Write a program to perform matrix multiplication on 2 matrices

77. Write a program that can sort a given unsorted list. Dont use any built in function for sorting.

78. Write a program that can find the most used word in a bollywood song

79. Assume a list with numbers from 1 to 10 and then convert it into a dictionary where the key would be the numbers of the list and the values would be the square of those numbers.

80. Write a program to merge two given dictionary

81. Write a program to swap the key value pair for max and min values
    Eg if the dict is like this {'a':1,'b':2,'c':3}
    Output should be {a:3,b:2,c:1}

82. Write a program to find histogram of a given set of numbers. Take bin size from user. Print the result in the form of a dictionary.

83. Write a function that accepts a string and returns the number of upper case chars and lower case chars as a dictionary

84. Write a function that accepts a list of strings and performs Bag of words and convert it to numerical vectors.
    https://en.wikipedia.org/wiki/Bag-of-words_model

85. Write a dummy program that can perform login and registration using a menu driven program

86. Write a program that accepts neighbors(set of 2D co-ordinates) and a point(single 2D co-ordinate) and tells nearest neighbor(in terms of euclidean distance)

87. Write a function that accepts a number and returns it's factorial. You can not use any loop
